

ABSTRACT OF THE DISCLOSURE

A system and method are provided for providing data regarding the operation of a control system. A Web server module is provided that is electrically connected to a control system controller. The Web server module contains a memory operative
5 to store a non-markup language Web site database that completely defines a Web site for providing information regarding control system. A Web server module configuration application is also provided that receives user input to create the Web site database. The Web site database is transmitted to the Web server module from the Web site configuration application. When a request is received at the Web server
10 module for a Web page, the Web server module utilizes the Web site database to dynamically generate the requested Web page.
